

To the FCC: Please reject the National Association of Broadcaster's petition (04-160). I have made my own decision to pay a monthly fee to receive satellite radio, and I was delighted when XM Radio started broadcasting local traffic and weather. I like being able to get traffic and weather info without having to wait for up to 15 mins as I would on local broadcast radio. Many times, I would tune to broadcast radio for traffic, and by the time I heard about a traffic jam, I would be right in the middle of it. Please allow XM Radio to continue to broadcast local information. Let me make my decision based on the quality of content, and not by limiting my options.

Thank you.
